

DATA PROTECTION IS BUSINESS PROTECTION

Whether it's a system crash, file corruption, human error, or environmental disaster, the result remains the same – each denies access to mission-critical information, crippling your ability to conduct business both inside and outside your organization. Clearly, data protection is business protection especially when information is the core resource of your organization. When it comes to protecting the data that runs your business, there is no alternative to a documented and tested plan. As companies continue to focus on technological innovation and growth, data backup often fall to the bottom of the priority list.

A PROVEN SOLUTION

WebHouse's backup assessment evaluates and documents your current backup environment and processes, then compares those findings against the latest technologies, methodologies and 'best practices' to provide a foundation for effective planning and budgeting.

IDENTIFYING A PATH TO BACKUP OPTIMIZATION

Results and recommendations based on a Backup/Restore Assessment allow you to understand and optimize your current backup environment. The detailed assessment is tailored to provide you with information including.

- ✓ A documented backup plan
- ✓ Verification of backup integrity
- ✓ An outlined risk assessment
- ✓ Defined areas of strength and weakness
- ✓ Industry best practices

By providing you access to consultants with industry leading expertise, you can ensure that you have an effective backup and restore strategy that meets your business requirements.

IMPORTANT POINTS OF CONSIDERATION

- ✚ What is the realistic backup/restore window?
- ✚ Where does critical data reside and is it being backed up first?
- ✚ What is the current disaster recovery plan?
- ✚ How often are restore procedures tested?
- ✚ Can established SLAs for restoring data be met?
- ✚ What types of backups are being performed?
- ✚ Where backups stored and what are the data retention policies?
